# Definition of the partial derivative 

Isao Sasano

The partial derivative of $f(x, y)$ with respect to $x$ is defined by

$$
\frac{\partial f(x, y)}{\partial x}=\lim _{h \rightarrow 0} \frac{f(x+h, y)-f(x, y)}{h}
$$

and the partial derivative of $f(x, y)$ with respect to $y$ is defined by

$$
\frac{\partial f(x, y)}{\partial y}=\lim _{h \rightarrow 0} \frac{f(x, y+h)-f(x, y)}{h}
$$

The derivative of $f(x)$ is defined as follows.

$$
\frac{\mathrm{d} f(x)}{\mathrm{d} x}=\lim _{h \rightarrow 0} \frac{f(x+h)-f(x)}{h}
$$

The term "derivative" refers to the result of differentiation and the term "partial derivative" refers to the result of partial differentiation.
